Your Comments: Monitoring toxic sediment in the hope that it will someday go away is not enough--the EPA's preferred alternative is very flawed. It is imperative that the cleanup include removal and offsite storage of toxic sediment. We do not need the risk of contaminants continuing to plague our river. This project must also include long term monitoring and oversight to measure the success of the plan that is implemented. A slapdash job is not what the Willamette River, the City of Portland, and the people of Oregon need.
